

The Chain of Trust

Agenda

What?

How?

Why?

Types

Security Model

Smart
Contracts

Agenda

SOLIDITY

DEMO

PLATFORMS

SCOPE

What?

Blockchain \neq Bitcoin

Blockchain is gold

Bitcoin is jewelry

What?

Immutable

Distributed

Ledger (Linked List)

Immutable

centralised

decentralised

distributed

Distributed

Ledger

How?

Distributed Computing

P2P Connections

Hashing Algorithms

Merkle Tree

Consensus

Distributed Computing

P2P Connections

Hashing Algorithms

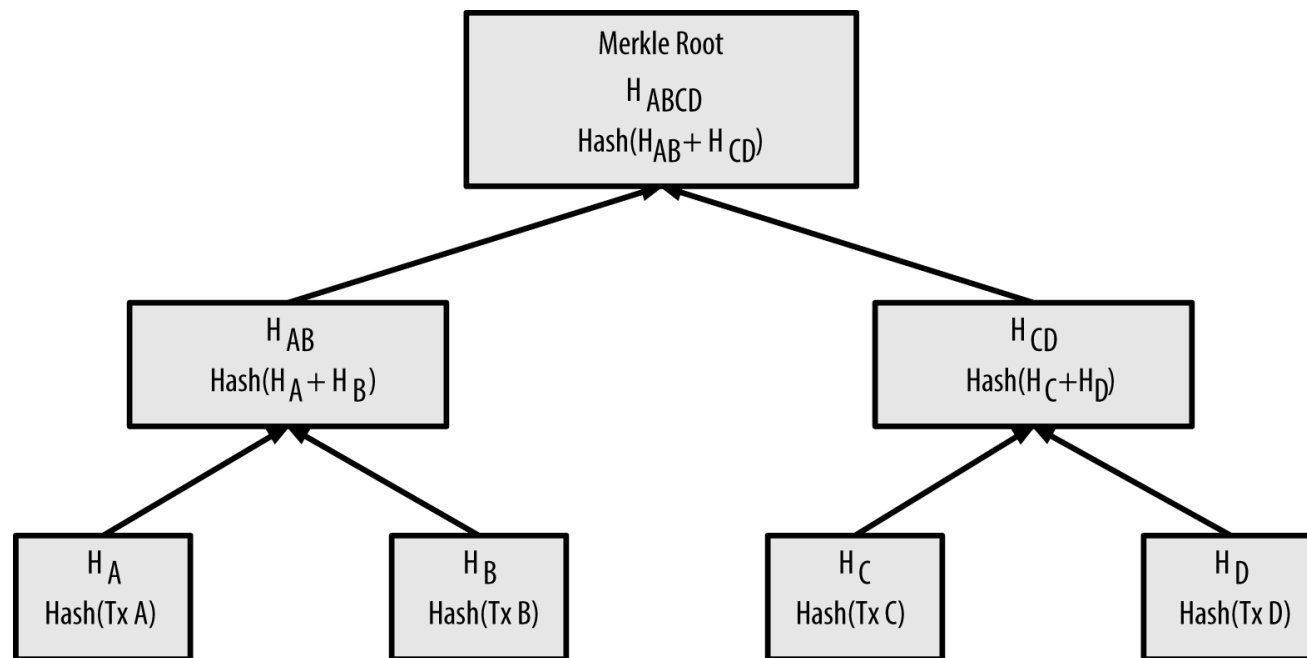

One Way Encryption

Avalanche Effect

Pre-Image Resistance

Merkle Tree

Consensus

Proof of Work

Proof of Stake

Proof of Authority

Why?

Crypto Currencies

IPFS / StorJ

DAPPs

Why?

Freedom

More Control

Democratic Internet

Types

PRIVATE

PUBLIC

Security Model

Byzantine Fault Tolerance

Identity

Cryptography

Byzantine Fault Tolerance

- 2 Generals Problem
- Algorithm $OM(m)$

2 Generals Problem

Alice & Bob on sides of mountain

Mountain top enemy

Unison Attack

Communication Gap

Algorithm

OM(m)

Oral Message Algorithm

Commander Sends message

Lt. Interprets message as 0 or 1

Identity

No Accounts

No Balances

No Addresses

No Coins

No PII

Cryptography

AES

ECDSA

SHA

Smart Contracts

Ethereum

Ethereum State

Gas

EVM Simultaneous
Computation

Anything can be on
blockchain

Solidity

Object Oriented

Works on EVM

Language for Smart
Contracts

Demo Time

Platforms

ETHEREUM

BITCOIN

HYPERLEDGER

Scope

Jobs

Disruption

New Internet

Jobs

SOLULAB

CYBER
INFRASTRUCTURE
INC.

YES BANK

IPFS

PIXEL CRAYONS

Disruption

Untapped Market

Web 3.0

Identity Management

Distributed AI

New Internet
